

BMP Training for Canegrub and Weed Management

BMP Training for Canegrub and Weed Management brings you the latest in best management practices in an interactive, on farm workshop style training session.

The course will cover canegrub control, weed management strategies, application technology and nozzle selection, herbicide resistance, farm compliance and emerging technologies.

In-field canegrub control session

Growers will be taken through best practice management of canegrubs, with a focus on getting the best value out of the product of choice and reducing opportunities for losses to the environment.

Crop Care Australia will provide valuable insights into the use of suSCon granular canegrub control products.

Tim Murphy (Bayer Crop Science) will talk growers through best practice management of Bayer Confidor Guard.

Learn with a variety of presenters

Trevor Willcox

With extensive experience in the Australian sugar industry, Trevor has worked with SRA and DAF, together with chemical company reps, to put together this workshop which updates products and application techniques to get the best results.

Allan Blair (ODAF)

A well respected agronomist who works with the DAF Cane Extension team, Allan has wide-ranging experience in the area of entomology, agricultural chemical use and pesticide application technology.

Local support is offered by BMP Officers and respected agronomists from the SRA Adoption team.
