Comments:

Throughput for the Burdekin mills in week seven was down with just over 350,000 tonnes of cane processed.

The below-budget result was mainly due to superheater tube failures in Inkerman Mill's No.1 boiler, which resulted in about 50 hours of lost time.

The stops were caused by chemical carry-over from the boiler feedwater into the steam circuit.

All Inkerman burnt cane was processed before the factory was shut down on Saturday night, to enable work teams to carry out detailed investigations and corrective actions.

Average weekly CCS was 14.45. This was again well above budget thanks to the dry cool conditions.

The highest CCS sample was 17.8 from a rake of Q240 plant cane in the Invicta Mill area.
