Using trees to control weeds

[A video](#) just released by the Queensland Department of Agriculture and Fisheries (DAF), shares some practical advice on how to effectively get rid of weeds in riparian zones by using passive revegetation.

“By selecting the right herbicide that allows native trees to flourish, weeds can be driven out - something that’s good for growing sugarcane and our creeks and waterways,” said Marcus Bulstrode, DAF agronomist.

The video is freely available on the [Queensland Agriculture YouTube](#) channel. For more information please contact DAF on 13 25 23.
