Comments:

Another good crushing week in the Burdekin saw just under 405,000 tonnes crushed – the highest weekly throughput for the region, season to date.

It brings the season total to just over 2.5M tonnes, or approximately 30 per cent of the forecast crop.

The average weekly CCS was 14.17, which is still below the original budget, but is getting closer due to the continued dry conditions.

The highest CCS sample was 17.4 from a rake of Q240-1R in the Stockham Road productivity zone.

We are one-third of the way through the season and the number of incidents and recorded near misses at level crossings remains very low.

Please continue to approach all cane rail crossings with caution and always give way to cane trains.
