#### Comments:

Three mills commenced production for the 2024 season this week, putting through just over 88,000 tonnes.

The dry weather has provided favourable harvesting conditions.

The average weekly CCS was 13.35 which is above budget helped by the cool dry conditions.

The highest CCS sample of 16.1 was from a rake of KQ228-P in the Darvenizas (Inkerman) productivity district.

The season start has been a good one given the scale of the capital and maintenance program and the disruption caused by industrial action.

Cane trains are now operating around the clock, across our cane rail network. Please remember to use your train brain and always give way to cane trains.
