Understanding the WAND System: Enhancing Spray Decisions

WAND, a collaboration by GRDC, CRDC, and Goanna Ag, provides two-hour nowcasts of surface temperature inversions critical for spray timing. With over 100 towers across QLD and NSW, WAND reduces spray drift risks.

Modes of action are based on how they work

Herbicides disrupt enzymes in weeds at specific target sites, crucial for plant growth and energy production. Understanding this disruption (Mode of Action - MOA) aids in effective spraying decisions.
